Roamly Groups — V1 Go-to-Market Summary

Nov 3, 2026 · @Martin

At a glance

Roamly Groups is built and hosts can support it. V1 turns group demand we already have into completed bookings, and every booking puts Roamly in front of the guests.

strategy at a glance · 6 parts

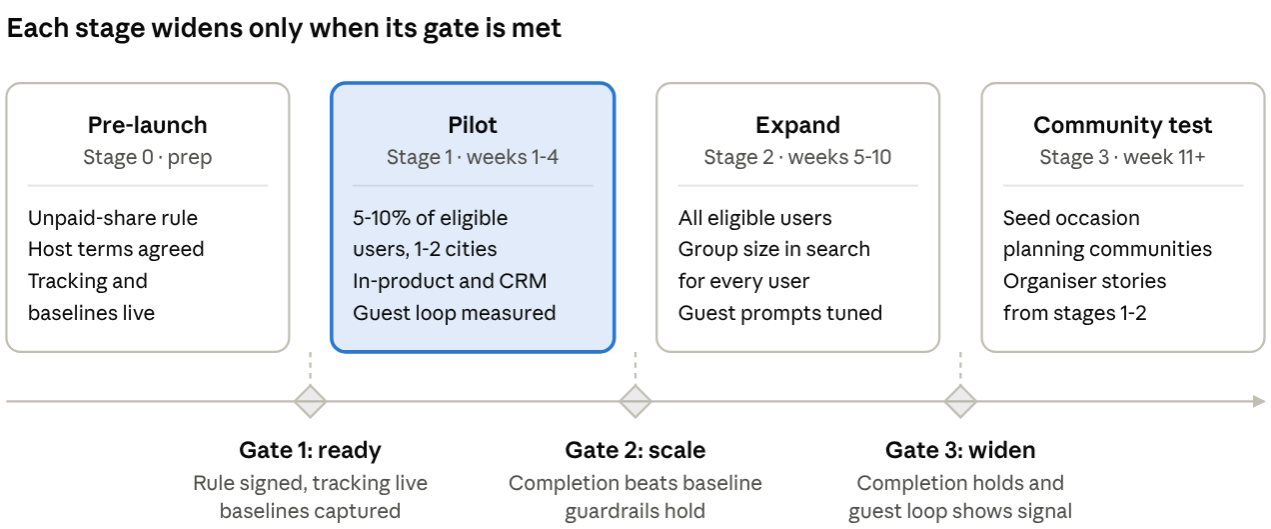

Why now

The demand is already on Roamly. We lose it at checkout.

- **Users ask for it.** Group booking comes up in support tickets without prompting.
- **Users work around it.** Groups book across separate accounts and split payments by hand.
- **The drop-off is real.** Multi-account sessions fall away before payment. Hosts can already take groups.

The rollout: staged, gated, instrumented

We launch to existing multi-account users first and widen only when the data says so. Solo booking is untouched.

staged rollout · 4 stages, 3 gates

The pilot settles whether groups fail on commitment or money. Every step is tracked from invite to payment.

Channels: owned only in V1

The users we need are already on Roamly, so we reach them where they book.

Channel	Job	Stage
In-product prompts	Convert at intent: group size 3+, a second account joining, "invite your group" at checkout	1
Lifecycle CRM	Re-engage users with the multi-account pattern	1
Guest surfaces	Run the loop: invite, share payment, shared itinerary, post-trip "plan your own"	1-2
Customer support	Route group-booking tickets to Groups	1
Community seeding	Test reach in hen, wedding and birthday planning communities	3, gated

Not in V1: paid acquisition, influencers, corporate offsites, launch PR.

How we'll know

North star: group booking completion rate. This is the share of Groups sessions reaching a fully paid booking. Target: baseline + X points by the end of stage 2.

Where groups fail: the funnel tells us whether commitment or money is the problem.

1. Group created
2. Invites accepted (headcount)
3. Date agreed (availability)
4. Shares paid by the deadline (money)
5. Booking confirmed

Also tracked	Measure	Bar
Guest loop	Guests booking on their own account within 90 days	Proves Acquire
Solo health	Solo conversion and ratings	Within ±Z% of baseline
Host health	Host cancellations on group bookings	Within ±Z% of baseline
Payment health	Payment failures and chargebacks per group booking	Within ±Z% of baseline
Support load	Contacts per group booking	Within ±Z% of baseline

Decisions we need

Nothing launches until the unpaid-share rule is signed off. It is the long pole.

Decision	Owner	Proposal
Unpaid-share rule	Payments, risk, legal	Shares due by a deadline. Organiser covers or releases seats. Roamly does not underwrite in V1.
Host terms for groups	Host ops	Confirmed headcount at the deadline; agreed cancellation terms
Stage 1 cities	Host ops, product	1-2 cities with spare group capacity
Go/no-go owner per gate	Product leadership	To be named
Payment deadline	Hosts, payments	X days before the experience

Then we move on the data: if commitment fails, we build availability and headcount locking. If money fails, we tune deadlines and reminders. If a guardrail breaches, we pause.
