PRODUCT • GO-TO-MARKET STRATEGY / V1

Roamly Groups

Turn fragmented group demand into completed bookings — then convert guests into tomorrow's customers.

01 EXPAND	02 PROVE	03 ACQUIRE
Recover existing demand	Validate the group journey	Grow through guest invitations

THE COMMERCIAL THESIS

Groups already want to book on Roamly. Today, separate accounts and manual coordination create friction and lost bookings. Groups brings booking, payment and itinerary into one shared experience.

Primary goal: Expand value from existing customers.
Secondary goal: Prove guest invitations create incremental acquisition.

BEACHHEAD SEGMENT

Occasion groups of 6–12

Hen and stag parties, milestone birthdays and other fixed-date occasions.

Buyer: The organiser chooses and books.
Users: Guests confirm, pay their share and use the shared itinerary.

THE PROMISE

One experience. One group plan. Everyone pays their share.
No chasing payments, juggling accounts or managing separate arrangements.

CHANNEL APPROACH / PLG PRIMARY, CLG SECONDARY

IN-PRODUCT Primary	Target existing users showing multi-account booking behaviour. Introduce Groups contextually and make the organiser journey self-serve.	**CRM / LIFECYCLE** Primary	Reach likely organisers using relevant booking history, with tailored email and in-app prompts.
GUEST INVITES Growth loop	Each booking exposes Roamly to 5–11 potential new customers through invitations, payment links and shared itineraries.	**COMMUNITIES** Experimental	Test discovery through hen, wedding, birthday and travel-planning communities. Do not make launch dependent on this channel.

CONTROLLED LAUNCH / LEARN WITHOUT DISRUPTING SOLO

1 LAUNCH	2 LEARN	3 EXPAND
Existing users with multi-account booking signals. Use a staged rollout and comparable holdout where practical.	Track invite accepted → date agreed → share paid → booking completed. Add targeted feedback to explain drop-off.	Optimise the journey, validate occasion-group economics and host capacity, then broaden segments and community tests.

NORTH-STAR SUCCESS METRIC

Incremental completed group bookings per eligible existing organiser

Compare the staged-launch cohort with a comparable holdout over an initial 30-day measurement window.

SUPPORTING MEASURES

Booking completion • invite acceptance • date agreement • guest payment • incremental revenue • guest-to-independent-booking conversion

Guardrails: Solo conversion, ratings and repeat booking remain stable.

PRE-LAUNCH MUST-HAVE Set the payment default and liability rule: who is responsible if a guest does not pay?

VALIDATE Multi-account behaviour predicts demand • payment/coordination drive drop-off • group invites create incremental acquisition.
